

Station D

Goal : Your goal in this station is to figure out how the zombie virus was originally transmitted and what hypothesis might explain how it happened.

Step 1 Status Report

Listen to the status report you will find on the USB key labeled # 1.

An increasing number of people are disappearing, especially at night. These victims reappear later on, but are very different than before. They are slow-moving, but very strong. They are constantly hungry and attacking at an alarming rate.

We're currently trying to figure out how to stop them. So that we can find a permanent solution, we need to figure out how this virus originally infected the first victims.

Here's what we do know. All of the victims attended a carnival in Vancouver. We've collected interview, but haven't had time to review them to find the common elements.

What we need from you agents, is for you to investigate. We need to know the root of this virus so that we can create a vaccine to stop the infection.

Step 2:

Each person in your team will listen to two interviews. You will find them on the USB keys labeled # 2-3-4-5. Use the chart in your student booklet to note the carnival activity that each person participated in that day. Put a check mark in the right category.

Step 3: Compare your answers with your partners by filling-in the grid (ask questions; ex: Did Henry go to the exotic bird show?)

Step 4: Make a hypothesis to determine how the virus was transmitted and what might explain how it happened. Write your answer in the student booklet.

Material Needed

✓ Student Booklet

✓ One mp3 player for each

student
